

Syed Muhammad Abid Hussain

Senior Full-Stack Software Engineer • MS Data Science (In Progress)

+92 321 286 9005 | syedmuhammadabid110@gmail.com | linkedin.com/in/syedmuhammadabid | github.com/syedmuhammadabid | Karachi, Pakistan

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 7+ years building enterprise-scale web applications across publishing, e-commerce, retail, and fintech. Specialised in React.js, Next.js, Node.js, Ruby on Rails, and AWS, with hands-on expertise in Docker, Terraform, Kubernetes, and CI/CD automation. Technical leader pursuing an MS in Data Science at NED University, targeting senior full-stack, data engineering, and AI-enabled engineering roles.

TECHNICAL SKILLS

Core Skills: React.js, Node.js, Ruby on Rails, TypeScript, Next.js, PostgreSQL, AWS, Docker, Kubernetes, Terraform, CI/CD, REST APIs, GraphQL, System Design, Agile/Scrum

Languages & Runtime: JavaScript (ES6+), TypeScript, Python, Ruby, SQL, C#

Frontend: React.js, Next.js, Redux, Angular, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI, webpack

Backend: Node.js, Express.js, NestJS, Ruby on Rails, REST APIs, GraphQL, Socket.io, Microservices, RabbitMQ

Databases: PostgreSQL, MySQL, MongoDB, Redis, AWS DynamoDB, Firebase, Supabase

Cloud & DevOps: AWS (ECS Fargate, RDS, S3, ALB, Cognito, CloudWatch, EC2, ECR), Terraform, Docker, Kubernetes, GitLab CI/CD, GitHub Actions

Testing & Quality: Jest, RSpec, SonarQube, Playwright, RuboCop, Brakeman, ESLint, Prettier, Unit Testing

Data Engineering: ETL Pipelines, Data Cleaning & Transformation, Feature Engineering, CubeJS, Data Aggregation

AI & Emerging Tech: Agentic AI, Generative AI, LLM Applications, AI Automation Workflows

Tools & Practices: Git, Jira, Postman, VS Code, Agile/Scrum, Design Patterns, OOP, Technical Leadership

WORK EXPERIENCE

Senior Software Engineer | [Atex Software \(via Contour Software\)](#) Nov 2024 – Present • Oulu, Finland • Remote

Enterprise publishing and subscription management solutions for international media clients.

- Provided technical leadership on migration of 2 production apps from Rails 5.2 → 7.2 and Ruby 2.6 → 3.2, eliminating 14+ critical CVEs and improving scalability, reducing CI build time by ~20%.
- Drove performance optimisation of the Subscription Management module, reducing SonarQube complexity score by ~35% and improving page load performance by 40%.
- Optimised webpack configuration, reducing JS bundle size by 45% and cutting frontend build time from 4 min to under 90 seconds, directly improving deployment scalability.
- Designed and deployed AWS cloud infrastructure (ECS Fargate, RDS, ALB, Route53, S3, CloudWatch) using Terraform IaC with unit-tested infrastructure modules across multiple environments.
- Built GitLab CI/CD pipelines integrating SonarQube, Brakeman, and RuboCop for automated testing, security scanning, and deployment — enabling cross-functional teams to ship with confidence.
- Developed Upsell, campaign management, and configurable product landing page features with secure Stripe and AWS Cognito integrations.
- Implemented XSS sanitisation, established ESLint/Prettier/RuboCop standards, and resolved high-severity security vulnerabilities across the stack.
- Conducted code reviews, enforced quality standards, and mentored team members on best practices.

Software Engineer | [ACCEO Retail Solutions \(via Contour Software\)](#) May 2021 – Oct 2024 • Markham, Canada • Remote

Retail management and ERP-style SaaS applications for North American enterprise clients.

- Designed and developed a scalable mobile Point-of-Sale (mPOS) application with API design covering virtual cart, stock search, and shopping cart lifecycle management for retail operations.
- Built a financial card management system with secure transaction handling, banking workflow integrations, and unit-tested service layers for customer-facing financial services.
- Developed a custom CubeJS query builder with PostgreSQL-backed data pipelines, enabling dynamic data filtering and self-serve business intelligence reporting.
- Delivered full-stack features using React.js, Redux, and Material UI in close cross-functional collaboration with Canadian product, design, and QA teams in an agile environment.

Software Developer | Daraz (Alibaba Group) Oct 2019 – Apr 2021 • Karachi, Pakistan

High-traffic e-commerce platform — one of South Asia's largest online marketplaces.

- Built Daraz Travel — a full-stack ticket booking platform for intercity bus reservations serving thousands of daily transactions, including seat selection, checkout, payment integration, and admin dashboards.
- Developed Daraz University, a CMS platform for newsletters and seller stories within the Daraz Seller Center ecosystem, supporting tens of thousands of active sellers.
- Optimised frontend performance and maintained REST APIs serving tens of millions of monthly active users across South Asia, contributing to measurable reductions in page load time.

Software Engineer | Systems Limited Dec 2018 – Sep 2019 • Karachi, Pakistan

- Developed mobile-friendly government portal modules for FAHR (UAE Federal Authority of Human Resources), digitising workforce capability management and HR workflows for a federal authority.
- Built B2B portal features for Etisalat enterprise clients — account management, bill payment, and purchasing workflows integrated with telecom backend systems.

Software Developer | Ciphers Lab Jan 2018 – Nov 2018 • Karachi, Pakistan

- Built Queno, a mobile-responsive educational communication platform connecting schools and parents, delivering real-time collaboration and engagement features.

NOTABLE PROJECTS

Enterprise Publishing & Subscription Platform — Atex Software

- Full-stack subscription lifecycle management covering customer onboarding, invoicing, accounts receivable, and renewal workflows for European publisher clients.
- Distribution management system with configurable campaign banners, upsell flows, and multi-brand product landing pages integrated with Stripe and AWS Cognito SSO.

Multi-Source ETL Data Pipeline — Personal / Academic

- Designed and built a production-grade ETL pipeline ingesting data from Google Drive, CSV, JSON, PostgreSQL, MongoDB, Firebase, and REST APIs.
- Implemented data cleaning, normalisation, aggregation, feature engineering, and validation layers with automated database loading — foundation for ML-ready datasets aligned with MS Data Science coursework.

EDUCATION

Master of Science — Data Science Jan 2024 – Present (Expected 2026) • Karachi, Pakistan

NED University of Engineering and Technology

Machine Learning, Deep Learning, NLP, Generative AI, Computer Vision, Big Data Analytics, Time Series Forecasting, Data Engineering • EQF Level 7

Bachelor of Engineering — Software Engineering Jan 2015 – Dec 2018 • Karachi, Pakistan

University of Karachi (UBIT)

Software Engineering, Data Structures & Algorithms, Database Systems, OOP, Operating Systems, AI Fundamentals, Information Security • EQF Level 6

CERTIFICATIONS

- **Introduction to AI Agents** — DataCamp (*Dec 2025*)
 - **Generative AI for Everyone** — Coursera / DeepLearning.AI (*Jan 2025*)
 - **IBM Python for Data Science** — Cognitive Class (*May 2024*)
 - **Front-End Web UI Frameworks and Tools** — Coursera (*Apr 2020*)
-

LANGUAGES

English — Professional working proficiency **Urdu** — Native
